DEC REMARKS:

KD spoke with CTMale. Phase 2 on-going as part of potential property transaction. Boring inside store had staining/odor and PID 53 ppm at 4-8 ft bgs. Additional borings to be done today. CTM will send me a summary after all have been completed. Building has hydraulic lifts, potential source?

11/15/17: CTM provided closure report via email. Report states that elevated PID readings, petro odors, black staining, and a "viscous oil type liquid" were encountered during borings. Only exceedance of SCOs was chromium, in one boring.

12/6/17: KD spoke with CTM regarding report. No samples were analyzed for TICs, despite likely age and material of spill. Report recommends lifts being removed, but they have not been. Report also recommends impacted soils being removed and disposed of properly, but is not likely feasible without demolishing the building.

Spill is closed, but contamination remains on-site. If contaminated soils or groundwater are encountered during any future intrusive site work, including but not limited to demolition of the building or removal of hydraulic lifts, the soil and/or groundwater must be dealt with in accordance with current state law.
